2. TECHNICAL DATA

Filter specifications

Nominal pressure	420 bar
Maximum flow rate	960 l/min
Temperature range	-30 °C to + 100 °C (-30 °C to -10 °C: max. 210 bar)

Material of filter head EN-GJS 400-15,

Material of filter bowl Steel

Clogging indicator

Type	VD
Pressure setting	5.0 bar (DFF: 8.0 bar)

Bypass (optional)

Cracking pressure	6.0 bar
-------------------	---------

Miscellaneous

Seal	NBR (= Perbunan)
Installation	As inline filter with or without reversible oil flow
Special designs and accessories	<ul style="list-style-type: none"> ■ Seals in FKM ■ With bypass valve (except for DFF 1500) ■ Oil drain plug up to DF/DFF 280 ■ Element top-removable – type code: 3.X (only DF filters 330-1320)
Spare parts	See original spare parts list
Certificates and approvals	On request

3. GENERAL DESCRIPTION

3.1 FILTER HOUSING

Design

The filter housings are designed in accordance with international regulations. They consist of a filter head and a screw-in filter bowl. DFF filters are suitable for flow in both directions.

Standard model

- Connection for a clogging indicator in filter head
- Without bypass valve
- Oil drain plug with pressure release (DF/DFF 330 and above)
- 1 or 2-piece filter bowl available as an option for DF/DFF 280-660
- 2-piece filter bowl standard for DF/DFF 990 and above

3.2 FILTER ELEMENTS

The HYDAC filter elements are validated and their quality is constantly monitored according to the following standards: ISO 2941, ISO 2942, ISO 2943, ISO 3724, ISO 3968, ISO 11170, ISO 16889.

Pressure stability values

Designation	Model code	Collapse pressure
SUSTAINMICRON®	SN	20 bar
Betamicron®	BH4HC	210 bar
Stainless steel wire mesh	W, W/HC	20 bar

3.3 FATIGUE STRENGTH

The fatigue strength is:

- DF 30-1320: 2,000,000 load reversals at nominal pressure
- DF 1500: 3,000,000 load reversals at 280 bar
300,000 load reversals at 420 bar

3.4 COMPATIBILITY WITH OPERATING FLUIDS (ISO 2943)

- Hydraulic oils HL to HVLP (DIN 51524)
- Lubrication oils (DIN 51517, API, ACEA, DIN 51515, ISO 6743)
- Compressor oils (DIN 51506)
- Biodegradable operating fluids HETG, HEES, HEPG (VDMA 24568) can only be used with FKM seals
- Fire-resistant fluids HFA, HFB, HFC and HFD (ISO 121922) as well as operating fluids with a high water content (>50% water content) on request

3.5 IMPORTANT INFORMATION

- The filter housings must be earthed e.g. via the system/pipe.
- When using electrical clogging indicators, the electrical power supply to the system must be switched off before removing the clogging indicator connector.

Modification number

X the latest version is always supplied

Supplementary details

L..., LED, V, W (for descriptions, see section 4.1)

5. FILTER CALCULATION

The total pressure drop of a filter at a particular flow rate Q and viscosity ν consists of the sum of the housing pressure drop $\Delta p_{\text{housing}}$ and the element differential pressure $\Delta p_{\text{element}}$ and can be calculated as follows:

$$\Delta p_{\text{total}} = \Delta p_{\text{housing}} + \Delta p_{\text{element}}$$

$\Delta p_{\text{housing}}$ [bar] = see performance curves

$$\Delta p_{\text{element}} \text{ [bar]} = Q \text{ [l/min]} \cdot \frac{SK \text{ [mbar / (l/min)]}}{1000} \cdot \frac{\nu \text{ [mm}^2\text{/s]}}{30}$$

SK = gradient coefficient (see section 5.2)

For ease of calculation, our Filter Sizing Program is available free of charge at: www.hydac.com/en/online-tools

5.1 HOUSING CURVES

The housing curves are based on ISO 3968. The housing curves apply to mineral oil with a density of 0.86 kg/dm³ and a kinematic viscosity of 30 mm²/s.

In this case, the differential pressure changes proportionally to the density.

DF 30

DF 60, 110, 140

DFF 60, 110, 140

DF 160, 240, 280

DFF 160, 240, 280

DF 330, 500, 660, 990, 1320

DFF 330, 500, 660, 990, 1320

DF 1500

DFF 1500

5.2 GRADIENT COEFFICIENTS (SK)

The gradient coefficients in mbar/(l/min) apply to mineral oils with a kinematic viscosity of 30 mm²/s. The pressure drop changes proportionally to the change in viscosity.

5.3 MAXIMUM FLOW RATE

The following maximum permitted flow rates (Q_{\max}) in l/min are possible for the various sizes and connection sizes for DF filters (DFF filters on request):

Size	Connector	Q_{\max} [l/min]
30	B	30
60	C; I	80
110	C; I	110
140	C; I	120
160	E, J	260
240	E, J	280
280	E, J	360
330	F	380
330	L	450
500	F	460
500	L	570
660	F	500
660	L	610
990	F	520
990	L	660
1320	F	540
1320	L	680
1500	G, L	877
1500	G, L (L flow)	960

Information regarding dimensioning:

The hydraulic load on the filter element is primarily determined by the flow rate and the geometry of the particular filter element. Exceeding the maximum permitted flow rate (Q_{\max}) and therefore the permitted hydraulic load can destroy the filter element.

Even the choice of operating medium can influence system performance and lead to problems during use such as electrostatic discharges.

Adherence to the maximum permitted flow rate should always be ensured throughout the system project planning process.

If you have any questions regarding dimensioning or project planning, please contact the technical sales department at HYDAC Filtrertechnik.
