- Measured value can be displayed in bar, psi or MPa

Description

The EDS 3400 is a compact electronic pressure switch with integrated digital display for relative pressure measurement in the low and high-pressure range.

The instrument has a stainless steel measurement cell with thin-film strain gauge. Depending on the particular version, the instrument can have one or two switching outputs, and there is the option of an additional switchable analogue output signal (4 .. 20 mA or 0 .. 10 V).

A special design feature of the EDS 3400 is that the display can be moved in two planes. The device can be installed in almost any position and the display can be turned to the optimum position without the usual additional expense of a mechanical adapter.

The 4-digit display can indicate the pressure in bar, psi or MPa. The user can select the particular measurement unit. When changing to a different measurement unit, the device automatically converts all the switching settings to the new unit of measurement.

The EDS 3400 is also available in a variant with menu navigation in accordance with VDMA.

Application fields

The main applications of the EDS 3400 are mainly in hydraulics, pneumatics and in refrigeration and air-conditioning technology.

³⁾ With mounted mating connector in corresponding protection type

Setting options: Standard design

All settings offered by the EDS 3400 are grouped in 2 easy-to-navigate menus. In order to prevent unauthorised adjustment of the device, a programming disable can be set.

Setting options: menu navigation acc. to VDMA

All terms and symbols used for setting the EDS 3400 as well as the menu structure comply with the specifications in the VDMA Standard (VDMA 24574-1) for pressure switches.

The EDS 3400 can easily be adjusted via three buttons.

Setting ranges for the switching outputs

* All ranges shown in the table can be adjusted by the increments shown.

SP = switch point; RP = switch-back point

FL = temperature window lower value; FH = temperature window upper value

Additional functions

- Switching mode of the outputs adjustable (switch point function or window function)
- Switching direction of the switch outputs adjustable (N/C or N/O)
- Switch-on and switch-back delay adjustable from 0.00 .. 99.99 seconds
- Analogue output signal selectable 4 .. 20 mA or 0 .. 10 V
- Pressure can be displayed in measurement units bar, psi, MPa; other units of force, weight, etc. can also be set by the user.

Additional features of the standard design

- Choice of display (actual pressure, peak value, switch point 1, switch point 2, display off)
- Display filter for smoothing the display value during pressure pulsations
